we suggest adding address fields to the company form. when creating a vacancy, the address fields will be filled in automatically depending on the selected company. if the company does not fill in the location data - this does not block the creation of the vacancy, in which case the location fields when creating the vacancy will not be filled automatically.
in the case when the user fills in the vacancy addresses which are different from the data entered in the company address fields - the user is highlighted with a checkbox with the signature: update the location of the company in accordance with the above. the next time you create a vacancy will automatically fill in the fields with the location in accordance with the previously saved (with the ability to edit and overwrite the data)
